Projects

EVENT MANAGEMENT SYSTEM ✨

The Event Management System is a software solution for simplifying event planning, venue management, and ticketing. It ensures conflict-free event scheduling, seat reservation, and ticket sales, providing an efficient platform for event organizers and attendees.

Key Contributions:

- Designed and implemented a streamlined Event Management System.
- Key features include Venue Management, Conflict-free Event Registration, Seat Information Display, and an efficient Ticketing System.
- Implemented a ticket cancellation feature within a one-day window.
- Demonstrated strong skills in system design, data management, and user interaction.

MOBILEMART ✨

"MobileMarketing" is a versatile platform where users can publish, announce, and sell their phones.

Key Contributions:

- Implemented CRUD operations for all models of the project.
- Enhanced security with JWT authentication.
- Integrated database-driven logging using Serilog.

MARKET MANAGER ✨

"MarketManager" is a user-friendly retail Point-of-Sale (POS) app. It streamlines sales, inventory, and customer interactions, offering real-time sales tracking, inventory optimization, and secure payments. Simplifying retail operations, it enables data-driven growth and customer satisfaction.

Key Contributions:

- Successfully created and optimized CRUD operations for the "Supplier" class, improving data management efficiency.
- Implemented pagination, filters, and configurations, enhancing the user experience and data accessibility.
- Developed Excel import and export functionalities, streamlining data transfer processes.
- Conducted thorough unit testing, ensuring the reliability and functionality of the "Supplier" class.

About me

(27.03.2003)

A passionate junior .NET developer seeking to leverage his foundation in C#, ASP.NET, and ASP.NET MVC architecture gained through a comprehensive 9-month bootcamp program. Highly motivated to contribute to meaningful projects within a supportive and collaborative team environment.
